Norochcholai coal power project

It is time once again not to give the green light to start the Norochcholai coal power project. All existing generators in the island run to-day with the help of oil, steam, wind, solar, and biomas. And adding to this the proposed coal power plant project is at standstill. Why worry when we could turn all our generators at the Kelanitissa Power Station with the Kelaniganga water before allowing it to flow into the sea.

When the Kelaniganga water is diverted for the purpose of generating electricity, the waste outflow of water used to generate could be made to fill our existing Tanks, Lakes, and Ponds and allow excess water to flow up to Kankasanturai in the North, and farmers on both side of the Kelaniganga water pipe line will then be given enough water to cultivate.

Now this outflow of water from Kelaniganga after generating could be used to fill all tanks, lakes and ponds in the North Central Province, Puttalam, Gampaha, Polgahawela, Kuruneala, Maho, Polonnaruwa, Anuradhapura, Mannar, Vavuniya, Jaffna, and flow if any balance water to K.K.S. The Kaluganga water is also to be made use of likewise. By this every inch of land could be cultivated.

When the farmer is given enough water throughout the year without a single day's break, he could cultivate his land to grow his rice, veg-

etables, and fruits and the excess could be exported.

Not a single drop of oil and coal is needed to be used in future, in generating electricity. In the future electricity could be generated not by thermal but by hydropower.

This will save millions of rupees. Finally let the people of Norochcholai be in peace due to the smoke coal blanket and his land and the church. And when the farmers and people of the North is given enough water from the Kelaniganga pipe line for cultivation and pure water to drink, they will have nothing to grumble and the war will come to an end automatically and no cry of ethnic problems. I know the Jaffna man requires only water. Let us soak this land with water and make every inch be cultivated and not soak our soil with BLOOD.

I will be presenting the Technical Process of operation with river water to Generate Electricity in the future with Hydropower and this too will save more and more millions of rupees. Let us all wet this soil of ours with water and make it GREEN and BLUE sky to shine for ever, then rain clouds will fall to our land for prosperity.
