

Engineers are in the forefront of Sri Lanka's development and one of our distinguished members, Late Eng. D.J.Wimalasurendra, in as far back as 1924 had first proposed the idea of electrification of the country's railways and obtaining its benefits. Since then the **Institution of Engineers, Sri Lanka (IESL)** has been the leading activist, nudging and sensitizing governments over the past towards electrification of the railways. We are glad that the project has now got the necessary approvals. **IESL** would continue to give its fullest support and cooperation to make the railway electrification a reality in the quickest possible time.

*Prosperity to the nation through
Engineering Excellence*
